Hi,

I am getting errors with vzctl when trying to add a second guest using ploop as backend storage. Any ideas?

```
root@mpo-test-hn:~$$ vzctl create 102 --ostemplate oel-32-minimal --config vswap-1g --layout
ploop --hostname oel-test-32 --name oel-test-32 --diskspace 10240000 --ipadd 192.168.1.21
Creating image: /vz/private/102.tmp/root.hdd/root.hdd size=10240000K
Creating delta /vz/private/102.tmp/root.hdd/root.hdd bs=2048 size=20480000 sectors
Storing /vz/private/102.tmp/root.hdd/DiskDescriptor.xml
Adding delta dev=/dev/ploop1 img=/vz/private/102.tmp/root.hdd/root.hdd (rw)
Error in add_delta (ploop.c:1008): Can't add image /vz/private/102.tmp/root.hdd/root.hdd: Device
or resource busy
Error in add_deltas (ploop.c:1132): PLOOP_IOC_CLEAR: Device or resource busy
Failed to create image: Error in add_deltas (ploop.c:1132): PLOOP_IOC_CLEAR: Device or
resource busy [3]
Creation of container private area failed
```

Thanks

Mark
