Subject: IP address issue
Posted by cc4op5 on Fri, 31 Aug 2012 11:21:24 GMT

Hello,

I just installed OpenVZ on a test server, where I have 4 NICs:

eth0: internal IP address (static)
eth1: real IP address (assigned via DHCP)
eth2: real IP address (assigned via DHCP)
eth3: real IP address (assigned via DHCP)

I would like to assign all real IP addresses to one Virtual Machine. I tried Venet and Veth, but the IP addresses still resolve to the hosting machine instead of the virtual machine.

I am quite puzzled how to assign the IP addresses. Any help will be greatly appreciated. Thank you in advance.
