so 042stab057.1 is outdated, maybe you want to go with 042stab059.7.

I can't provide you an ebuild, because i don't use Gentoo, but i give you a hint.

I got the same problems on ArchLinux on my work to provide an openssl package for this distro. After many weeks of research i found the problem, you need to use gcc 4.4.x! There is also an bugreport [0] for that.

I run successfully stable [1] and testing [2] kernels on an ArchLinux systems, maybe you want merge some stuff in your ebuild.
