Hello,

I Migrate to CentOS 6 and I'm using the openVZ kernel last version, but I'm having trouble reading from memory .

The UB PRIVVMPAGES is set and configured but the system can not read memory on the container :

Cpu(s): 3.7%us, 0.9%sy, 0.6%ni, 50.0%id, 44.7%wa, 0.0%hi, 0.0%si, 0.1%st

Mem: 4294967295k total, 0k used, 4294967295k free, 0k buffers

Note : note that the use of memory in the system is zero .

any suggestions to fix?

Kernel: 2.6.32-042stab059.7

PRIVVMPAGES="503216:503216" equivalent to 2MB but the system is setting all memory that I have in the container and even then, the memory usage is shown as zero

Thanks!!
