Oh, let's I understand what's bothering you! =)

Well, free gets information from /proc/meminfo.

Free memory in /proc/meminfo is calculated like:

<TOTAL MEMORY> - <OOMGUARPAGES>. Not privvmpages!

We can see, that in your case oomguarpages holds

19365 pages = 77460 Kb. This memory is marked as used in free!

HTH!
