Hi,

I tried the linux-openvz-2.6.32.59.7 kernel, but it crashed because it was compiled with gcc-4.6:

http://bugzilla.openvz.org/show_bug.cgi?id=2012

Do you think this sabayon patch solves something:?

<https://git.sabayon.org/overlays/sabayon.git/commit/?id=22e88a1a947499bccbb8817fed00d20657bf1939>

Right now I have to put a requirement in the ebuild only to build this kernel with gcc-4.4.x...

Best,

"In July 2005, after several failed attempts to legalise software patents in Europe, the patent establishment changed its strategy. Instead of explicitly seeking to sanction the patentability of software, they are now seeking to create a central European patent court, which would establish and enforce patentability rules in their favor, without any possibility of correction by competing courts or democratically elected legislators."
