Subject: Re: ploop and trim/ discard support Posted by kir on Wed, 12 Sep 2012 19:34:46 GMT View Forum Message <> Reply to Message On Sep 12, 2012 11:20 PM, "Corin Langosch" <info@corinlangosch.com> wrote: > Hi, > it seems that when creating & deleting files inside a ploop backed container the backing image file doesn't shrink. So the image file is still consuming around 400 GB, while in the container df shows only 100 GB in use. > II on host: -rw----- 1 root root 384G Sep 12 21:06 root.hdd > df on container: /dev/ploop1 493G 103G 390G 21%/ We have online shrink. It's "ploop balloon discard" or just "vzctl compact". You'd better have ploop and vzctl from git (both are really close to be released). > I assume this is because ploop doesn't get informed by the ext4 fs when blocks are no longer in use. Should it help to to mount the ext4 on the ploop device with the "discard" option? I didn't test if it helps yet, but at least I was able to pass the mount option (thanks to kir's recent enhancements) and it started the container without any problems. > /dev/ploop1 on / type ext4 (rw,relatime,barrier=0,data=ordered,discard)
