ploop and vzctl from git (both are really close to be released).

Shall I file a bug report for it?

quite similar to sdelete on windows ( http://pastie.org/4710364 or
http://technet.microsoft.com/en-us/sysinternals/bb897443.asp x)?
```

No, AFAIR we should use TRIM on ext4 and it simply reports unused space.
Balloon is used for "resize" via allocating some space and hiding it from user, but for compacting
it's a bit bad since can cause ENOSPC while it's really not...
