Good day folks!

What is the status of compat-wireless patch[1] support in OpenVZ?

I've tried to build the RHEL6 SRPMs, and faced two issues.

A minor one is that rpmbuild does not properly detect the OpenVZ kernel version, so that I had to slightly tweak the spec, by hardcoding the module and kernel source directories.

The bigger problem is the source-level conflict, which appears to run pretty deep:

```
[deepfire@feelingofgreen rpmbuild]$ rpmbuild -ba --target=`uname -m` --define 'kversion
2.6.32-042stab061.2' --define 'kvariants ""' SPECS/compat-wireless-next.spec
Building target platforms: x86_64

error: Bad exit status from /var/tmp/rpm-tmp.aNouYo (%build)

```

RPM build errors:

```
Bad exit status from /var/tmp/rpm-tmp.aNouYo (%build)
```

..and, indeed, the following hunk from patch-042stab061 makes the nature of this conflict obvious:

```
