Subject: [PATCH v5 03/10] ipc: segment key change helper introduced
Posted by Stanislav Kinsbursky on Wed, 19 Sep 2012 16:05:42 GMT
View Forum Message <> Reply to Message

This patch introduces existent segment key changing infrastructure.
New function ipc_update_key() can be used change segment key, cuid, cgid
values. It checks for that new key is not used (except IPC_PRIVATE) prior to
set it on existent.
To make this possible, added copying of this fields from user-space in
__get_compat_ipc_perm() and __get_compat_ipc64_perm() functions. Also segment
search by key and lock were splitted into different functions, because
ipc_update_key() doesn't need to lock the segment during check that new key is
not used.
