Overall, I like this series a lot. However, I don't really see this as a v3.7 material because we already have largeish pending updates to the slab allocators. I also haven't seen any performance numbers for this which is a problem.

So what I'd really like to see is this series being merged early in the v3.8 development cycle to maximize the number of people eyeballing the code and looking at performance impact.

Does this sound reasonable to you Glauber?

Pekka
