Hi,

I managed to have a kernel panic with the following kernel:

 http://mirrors.ch3rry.be/openvz/kernel/packages/sys-kernel/l inux-openvz-2.6.32.61.2.tbz2

I stopped the /etc/init.d/vz process, and then try to start a
container, and then the kernel crashes:

```
 ============================================================ ====
* 15:19 zoobab@hn-p104 ~% sudo zsh
* 15:19 root@hn-p104 /home/zoobab# /etc/init.d/vz stop
 * Shutting down CT 1042 ...
 * Shutting down CT 1041 ...

 * Bringing down interface venet0 ...

                              [ ok ]
* 15:19 root@hn-p104 /home/zoobab#
* 15:19 root@hn-p104 /home/zoobab# vzctl start 1041
Starting container ...
Container is mounted
Adding IP address(es): 80.65.132.187
Unable to add IP 80.65.132.187: Inappropriate ioctl for device
Unable to del IP 80.65.132.187: Inappropriate ioctl for device
Container start failed (try to check kernel messages, e.g. "dmesg | tail")
Stopping container ...

Message from syslogd@hn-p104 at Sep 21 15:20:00 ...
 kernel:[95079.766188] Kernel panic - not syncing: Fatal exception

Message from syslogd@hn-p104 at Sep 21 15:20:00 ...
 kernel:[95079.766188] Kernel panic - not syncing: Fatal exception
 ============================================================ ====
```

I will try to have the full console to see if I can grab more kernel messages.

"In July 2005, after several failed attempts to legalise software
patents in Europe, the patent establishment changed its strategy.
Instead of explicitly seeking to sanction the patentability of

software, they are now seeking to create a central European patent court, which would establish and enforce patentability rules in their favor, without any possibility of correction by competing courts or democratically elected legislators."
