
Subject: yum update problem on CentOS 5.8 server

Hi,

I tried to run yum update on a CentOS 5.8 OpenVZ host server today and something strange happened. Yum tries to update vzctl-core to version 4.0-1, which seems to require an updated plop-lib package, but the updated plop-lib package from the yum repository requires a kernel >= 2.6.32 (CentOS 5 runs on 2.6.18). As a result, the entire update fails. It looks like there are the wrong package versions in the yum repository for RHEL/CentOS 5 - or is there something else going on?

Best regards,
Holger

PS: full output from yum follows:

```
[root@paul ~]# yum update

You could try using --skip-broken to work around the problem

```
You could try running: package-cleanup --problems  
    package-cleanup --dupes  
    rpm -Va --nofiles --nodigest
```

```
[root@paul ~]#
```
