I'm too can't update my centos 5.8 installation due to conflict:

Processing Conflict: ploop-lib conflicts vzkernel < 2.6.32-042stab061.1

This problem happened more than one week ago and still present.

Full yum output:

```
# yum update
```

```

```
ploop-lib-1.5-1.x86_64 from openvz-utils has depsolving problems
```

```
--> ploop-lib conflicts with ovzkernel
```

```
Error: ploop-lib conflicts with ovzkernel
```

```
You could try using --skip-broken to work around the problem
```

```
You could try running: package-cleanup --problems
```

```
package-cleanup --dupes
```

```
rpm -Va --nofiles --nodigest
```

```
The program package-cleanup is found in the yum-utils package.
```
