Looks like for CentOS6 you must have latest kernel.

For CentOS5 you must remove ploop and ploop-lib packages (ofcourse if You don't use ploop for containers).

For now on CentOS5 server i have:

```
yum list |grep vz
```

```
* openvz-kernel-rhel5: mirror.duomenucentras.lt
```

```
* openvz-utils: mirror.duomenucentras.lt
```

```
ovzkernel.x86_64                2.6.18-308.8.2.el5.028stab101.1
```

```
vzctl.x86_64                    4.0-1                        installed
```

```
vzctl-core.x86_64               4.0-1                        installed
```

```
vzquota.x86_64                  3.1-1                        installed
```
