On a test environment i have done this:

- Downloaded the vzctl-4.0 & vzctl-core-4.0 rpm and converted with alien to deb
- Created a backup of /etc/vz/conf
- Installed the two newly created debs with "dpkg -i"
- Installed the missing libcgrouper: aptitude install libcgrouper1

Seems to work, but needs more testing.

Someone has done something similar? Can this be recommended?
