Subject: reboot in CT still does not work

Hi,

Does anybody who has the command reboot working inside a CT can post his config?

I have been trying ALLOWREBOOT="yes" parameter, the CT does not come back.

Best,

"In July 2005, after several failed attempts to legalise software patents in Europe, the patent establishment changed its strategy. Instead of explicitly seeking to sanction the patentability of software, they are now seeking to create a central European patent court, which would establish and enforce patentability rules in their favor, without any possibility of correction by competing courts or democratically elected legislators."
