
Subject: [PATCH v6 03/10] ipc: segment key change helper introduced

Posted by [Stanislav Kinsbursky](#) on Mon, 15 Oct 2012 10:29:59 GMT

[View Forum Message](#) <> [Reply to Message](#)

This patch introduces existent segment key changing infrastructure.

New function `ipc_update_key()` can be used change segment key, cuid, cgid values. It checks for that new key is not used (except `IPC_PRIVATE`) prior to set it on existent.

To make this possible, added copying of this fields from user-space in `__get_compat_ipc_perm()` and `__get_compat_ipc64_perm()` functions. Also segment search by key and lock were splitted into different functions, because `ipc_update_key()` doesn't need to lock the segment during check that new key is not used.

Signed-off-by: Stanislav Kinsbursky <skinsbursky@parallels.com>
