Quoting Stanislav Kinsbursky (skinsbursky@parallels.com):

> This patch introduces existent segment key changing infrastructure.
> New function ipc_update_key() can be used change segment key, cuid, cgid
> values. It checks for that new key is not used (except IPC_PRIVATE) prior to
> set it on existent.
> To make this possible, added copying of this fields from user-space in
> __get_compat_ipc_perm() and __get_compat_ipc64_perm() functions. Also segment
> search by key and lock were splitted into different functions, because
> ipc_update_key() doesn't need to lock the segment during check that new key is
> not used.
>
> Signed-off-by: Stanislav Kinsbursky <skinsbursky@parallels.com>

Acked-by: Serge E. Hallyn <serge.hallyn@ubuntu.com>
