ccto wrote on Thu, 25 October 2012 11:01At the moment, shall we simply chmod 755 /dev in /etc/rc.d/rc.local temporarily before patch?

May be "yes" in this manner:

(sleep 60; chmod 0755 /dev;) &

However this way (chmod anytime in rc.local) still make possible access to /dev when perms still 1777.
