Hi

Can any one help me in dumping the containers configuration file alone using vzdump util.

My Plane to backup a container:

1. Using vzdump util to dump conatiners configuration file alone, so that i can be huge in size and the time taken for the dump is also less.

2. Backup entire containers file using a file based backup util to a remote machine.

On restore:
1. Firs, I will restore the container using the dump file created using the vzdump util.

2. Copy the files available from the remote machine to its original path.

Regards,
Ravi S.
