From bash:

Quote:[root@n2 ~]# rpm -e vkernel-firmware  
error: package vkernel-firmware is not installed

From /etc/yum.repos.d/opensvz.repo

Quote:[opensvz-kernel-rhel6]  
name=OpenVZ RHEL6-based kernel  
#baseurl=http : //download.opensvz.org/kernel/branches/rhel6-2.6.32/current/  
mirrorlist=http : //download.opensvz.org/kernel/mirrors-rhel6-2.6.32  
enabled=1  
gpgcheck=1  
gpgkey=http : //download.opensvz.org/RPM-GPG-Key-OpenVZ  
exclude=vkernel-firmware

\* Added spaces after "http" because I don't have 10 messages yet.

Still, when trying to update:

Quote>Error: ploop-lib conflicts with vkernel

You could try using --skip-broken to work around the problem

\*\* Found 4 pre-existing rpmdb problem(s), 'yum check' output follows:

kernel-2.6.32-279.el6.x86\_64 has missing requires of kernel-firmware >= ('0', '2.6.32', '279.el6')

kernel-2.6.32-279.5.2.el6.x86\_64 has missing requires of kernel-firmware >= ('0', '2.6.32', '279.5.2.el6')

vkernel-2.6.32-042stab059.7.x86\_64 has missing requires of kernel-firmware >= ('0', '2.6.32', '279.1.1.el6')

vkernel-2.6.32-042stab061.2.x86\_64 has missing requires of kernel-firmware >= ('0', '2.6.32', '279.5.1.el6')

Any idea of how to fix this?

Thanks!

LATER EDIT: solved by removing older vzkernels.
