Hello

I am having the same problem. here my situation

I have a two nodes cluster

First: Dell PE2950 intel xeon

Second: Desktop intel CI7

When migrating offline between both nodes no problem.

When I migrate online from Xeon to CI7 OK

But when I migrate online from CI7 to Xeon i have the message "FPU context can't be restored.
The processor is incompatible."

I posted this problem in the proxmox forum and I got no solution so they suggested me to try in this forum.

Anybody has a hint?
