Subject: how to allow the packet sent from vz with an wrong source address
Posted by crazyshop on Thu, 10 Jan 2013 10:56:26 GMT

Hello,

I found vz will drop packet if source address not equal vz's address,
and print some message like "Dropped packet, source wrong"
I tried comment out follow code from the vz patch and rebuild kernel but didn't work
+   if (!ve_accessible_strict(ve, ve_old))
+   goto out_source;

It's not some bug because I want to sent the ip packet myself.
It can be sent from host but drop from vz.
Can somebody tell me how to allow that? Thanks.
