Hi I'm new to open vz i usually use xen im having issues with masquerading.

So far for xen it should be done like this:

Quote:

```
iptables -t nat -A PREROUTING -p tcp -m tcp --dport 9999 -j DNAT --to-destination ip:port
```

for post routing / masquerade it's done like this:

```
iptables -t nat -A POSTROUTING -p tcp -m tcp --dport port -j MASQUERADE
```

```
iptables -t nat -A POSTROUTING -j MASQUERADE
```

prerouting worked but the thing is postrouting doesn't.

how can i do this in open vz with the same results?
