I'm trying to find a feature / performance comparison between openvz, xen, virtuozzo.

I'm interested in comparing features, performance and compatibility.

I do have a virtuozzo node now at the moment. However, I'm thinking of going openvz.

Would someone please kindly clarify these below:

1. Any available web-gui for openvz (paid or commercial)? Or at least any plans for openvz to have one in the future? I'm curious why one does not exist yet.

2. Any obvious differences in comparison to virtuozzo aside the above missing web panel for admin/client?

Examples:

overselling?

burstable memory?

3. OpenVZ stable like virtuozzo?

Thanks in advance.
