Subject: vzctl enter got signal 9
Posted by Thelen on Mon, 25 Feb 2013 13:39:44 GMT

```
[root@server ~]# vzctl enter 134
entered into CT 134
root@bender:/# tail   got signal 9
                       exited from CT 134
[root@server ~]#
```

After typing first line, I typed tail, and then hit space about 8 times, and then got signal 9. Total time was about 2s from pushing enter after vzctl enter 134

It doesn't happen on other containers on the node.

Not sure how to troubleshoot, and I know I shouldn't be using vzctl enter necessarily.
