The manuals do not contain the version itself, but they do tell you which command switch to use to display the version

vzctl --version

On CentOS you can display the installed packages by using yum or rpm, for example:

yum info vzctl
rpm -q vzctl

The vzmigrate script is also a part of the vzctl package and doesn't seem to have a separate version. Perhaps this caused some confusion...

I'm afraid I don't use vzmigrate in the way you do, so I can't help you with the migrate command itself. Someone else will hopefully be able to...
