Subject: Network problem inside vps
Posted by chkhosting on Fri, 08 Mar 2013 05:34:34 GMT

Im having a issue with the vm resolving domains into ip address inside a vm. it will work for some domains but must wont resolve.

Everything works on the host I can ping any domain and get a response back but not inside the vm.

It sometime works but most of the time it doesn't.

I have disable the firewalls and change the dns on both the host and vm but still not resolving inside the vm.

I have a another vm host setup with the same provider and that one works fine with it.
