For the same reason I changed the debian-add_ip.sh script to something more meaningful for my VEx's. In the distro-add_ip.sh script you see:

```
FAKEGATEWAY=192.168.13.1  
FAKEGATEWAYNET=192.168.13.0
```

I've no idea why OpenVZ chooses the one it is now using. May be it has to change to something less harmful?
