Subject: Re: OpenVZ Containers and ports for domains
Posted by pol25 on Fri, 10 May 2013 05:32:42 GMT

Hello actually i have one fix ip in the server and have 2 containers openvz and into each container i have ispconfig , the problem it´s for domains , which ip i can do this domains , because the domain need one and for example if i use the same ip i can redirect to different containers using the port , same ip and change the port and works fine but for add domains , what kind of ip i need give for that and works

Regards and thank´s for your help !
