Yes understand , and can you tell me please if i can see for some solution for insert domain and this automac appoint the control panel install in container , and using the same ip load this domain , sure if you understand i try to do sure you can tell me some solution for i can investigate more and create solution , because when launch domain by DNS go to ip no port ok , but when receive this domain in this ip if it´s possible redirect this domain how i can do because the domain add into containers and into de contol panel of ispconfig no into the server , the real server

Thanks for yout help other time
