Subject: Re: Multicast Routing between VE0 and VE
Posted by moof on Fri, 04 Aug 2006 16:12:41 GMT

I have setup a veth interface, and have recompiled the kernel with the extra MULTICAST support.
 I have also setup routes for the multicast subnet on both the VE0 and VE. I have VE0 receiving multicast from outside eth0, however I can't get them to pass to the VE.

I also notice that the VE does not respond to ping broadcasts from VE0.

I've seen some references on the web to run a daemon, such as mrouted or pimd, though I have yet to find anything current.
