Subject: Re: Sharing /home between vps, nfs/bind mount not working? Posted by aistis on Mon, 07 Aug 2006 13:59:18 GMT View Forum Message <> Reply to Message

xinhes wrote on Fri, 04 August 2006 14:22Ahh, A simple case of RTFM

Mount/Umount scripts worked just fine:

Since each user usually gets one vps in my setup. I only have to mount one home in each vps. So for the ftp server (vps 1001) it goes like this:

1001.mount: #!/bin/sh mount -o bind,ro /vz/home/ftp /vz/root/\$VEID/home/ftp

1001.umount: #!/bin/sh umount /vz/root/\$VEID/home/ftp

 #vzctl ecec 1001 df

 Filesystem
 1K-blocks
 Used Available Use% Mounted on

 simfs
 10000000
 162724
 9837276
 2% /

 ext3
 1186166788
 527050296
 598862732
 47% /home/ftp

OPS, Just noted that bind mounts arent Read-Only. Put that up on the feature wishlist

try using this patch:

http://bugzilla.openvz.org/show_bug.cgi?id=160
