xinhes wrote on Fri, 04 August 2006 14:22Ahh, A simple case of RTFM

Mount/Umount scripts worked just fine:

Since each user usually gets one vps in my setup. I only have to mount one home in each vps. So for the ftp server (vps 1001) it goes like this:

1001.mount:
#!/bin/sh
mount -o bind,ro /vz/home/ftp /vz/root/$VEID/home/ftp

1001.umount:
#!/bin/sh
umount /vz/root/$VEID/home/ftp

#vzctl ecec 1001 df
Filesystem	1K-blocks	Used	Available	Use%	Mounted on
simfs	10000000	162724	9837276	2%	/
ext3	1186166788	527050296	598862732	47%	/home/ftp

OPS, Just noted that bind mounts arent Read-Only. Put that up on the feature wishlist

try using this patch:
