Hi,

after converting some containers to ploop, I noticed the following errors in dmesg:

....
[10416544.911982] JBD2: Detected IO errors while flushing file data on ploop34745p1-8
[10416545.501406] JBD2: Detected IO errors while flushing file data on ploop55626p1-8
[10416545.672716] JBD2: Detected IO errors while flushing file data on ploop55626p1-8
[10416545.749478] JBD2: Detected IO errors while flushing file data on ploop55626p1-8
[10416545.875440] JBD2: Detected IO errors while flushing file data on ploop55626p1-8
[10416545.959033] JBD2: Detected IO errors while flushing file data on ploop55626p1-8
[10416546.087430] JBD2: Detected IO errors while flushing file data on ploop55626p1-8
[10416550.840862] JBD2: Detected IO errors while flushing file data on ploop34745p1-8
[10416551.834908] JBD2: Detected IO errors while flushing file data on ploop55626p1-8
[10416576.164470] JBD2: Detected IO errors while flushing file data on ploop34745p1-8
[10416603.904074] JBD2: Detected IO errors while flushing file data on ploop34745p1-8
[10416604.180471] JBD2: Detected IO errors while flushing file data on ploop34745p1-8
[10416604.885114] md/raid10:md1: make_request bug: can't convert block across chunks or bigger than 256k 2493927408 16
[10416608.887892] md/raid10:md1: make_request bug: can't convert block across chunks or bigger than 256k 2490152912 32
...

Other containers work w/o any issues. I tried upgrading kernel to latest stable 2.6.32-042stab078.27, which didn't help at all. Centos 6.4 64bit.

If I mount the ploop file and fsck it, no errors are found.

Disks seem fine nad no problems otherwise with them.
