Hello,

I created a custom OpenVZ template from CentOS 5 template.  
I installed XAMPP on this template and changed default account and password.  
I want to write some user guide to teach others how to use this template.

Is there a formal format to put configuration file with template description in tag.gz template file?

I saw ubuntu-12.04-standard\_12.04-1\_i386.tar.gz had description: Ubuntu Precise Pangolin (standard)

ht tp://pve.proxmox.com/wiki/Ubuntu\_Precise\_Standard

Ubuntu template has description in Proxmox VE like this screenshot.

I want to know how to do it like Ubuntu template.

Thank you very much.
