Hi,

first of all you didn't mentioned software and kernel versions.
please provide kernel, vzctl, ploop versions. what distribution and version runs in HN.

I don't know anything about "r1soft", but errors are very strange. maybe it's something related that CT ploop disk locking or smth. it is question how software backup files.

also there can be other limits, for example max number of open files or other.

if you know how to reproduce or at least get more help how to investigate problem and maybe found a bug just file a bug report at <https://bugzilla.openvz.org/>

p.s. ploop layout gives very good backup tools. please read more in <http://wiki.openvz.org/Ploop/Backup>
