Thanks for the reply.

I just check the /etc/yum.repos.d/opensvz.repo file and it has the RHEL5 section:

```
[opensvz-utils]
```

```
...
```

```
[opensvz-kernel-rhel6]
```

```
...
```

```
[opensvz-kernel-rhel6-testing]
```

```
...
```

```
[opensvz-kernel-rhel6-debuginfo]
```

```
...
```

```
## RHEL5-based OpenVZ kernels. Come on, switch to RHEL6 already!
```

```
[opensvz-kernel-rhel5]
```

```
name=OpenVZ RHEL5-based kernel
```

```
#baseurl=#I cannot use links until I have posted more than 10 messages
```

```
mirrorlist=#I cannot use links until I have posted more than 10 messages
```

```
gpgcheck=1
```

```
gpgkey=#I cannot use links until I have posted more than 10 messages
```

```
[opensvz-kernel-rhel5-testing]
```

```
...
```

But when I do "yum install vzkernel", it complained:

```
Loading "rhnplugin" plugin
```

```
Loading "installonlyn" plugin
```

```
This system is not registered with RHN.
```

```
RHN support will be disabled.

--> Finished Dependency Resolution
Error: Missing Dependency: kernel-firmware >= 2.6.32-358.6.2.el6 is needed by package vzkernel
```

2 years ago, I have installed OpenVZ on RHEL5 using yum, and it worked at that time. But I couldn't find the installation instruction for RHEL5 any more.
