footylad wrote on Wed, 11 September 2013 01:13Did you ever solve this problem? I have the exact same issue. When I reboot the ifconfig returns with no devices. I have this issue on the same Ubuntu precreated templates and Debian...

turning some services to start in start time is not a openvz issue.

footylad: what devices you expect in ifconfig?

for both:

what os is in HN?

what kernel, vztools versions?
