---

At my OpenVZ server i did command: yum update and the result is:

Quote:

```
=====
=====
Package           Arch           Version                               Repository           Size
=====
Installing:
ovzkernel         x86_64        2.6.18-348.16.1.el5.028stab108.1    openvz-kernel-rhel5 25 M
Updating:
initscripts      x86_64        8.45.42-2.el5.centos.1              updates              1.6 M
vzctl            x86_64        4.5.1-1                               openvz-utils        122 k
vzctl-core       x86_64        4.5.1-1                               openvz-utils        269 k
```

Please is it safe to update ovzkernel this way? can it cause any issues?
