My network slowly experiences slowness, until it eventually dies off. And I am hoping someone that has had this problem could help:

It will then slowly DST Cache overflow.

At this point, i am a tad lost on what to do.

here is the sysctl.conf file:

```
net.ipv4.ip_forward = 1
net.ipv6.conf.default.forwarding = 1
net.ipv6.conf.all.forwarding = 1
net.ipv4.conf.default.proxy_arp = 0
net.ipv4.conf.all.rp_filter = 1
kernel.sysrq = 1
net.ipv4.conf.default.send_redirects = 1
net.ipv4.conf.all.send_redirects = 0
kernel.panic = 10
net.ipv4.tcp_mem = 786432 1048576 1572864
net.ipv4.netfilter.ip_conntrack_max=196608
net.ipv4.tcp_syncookies = 1
net.ipv4.tcp_no_metrics_save=1
net.ipv4.netfilter.ip_conntrack_tcp_timeout_syn_recv = 5
net.ipv4.netfilter.ip_conntrack_tcp_timeout_established = 600
net.ipv4.netfilter.ip_conntrack_tcp_timeout_syn_sent = 15
net.ipv4.netfilter.ip_conntrack_tcp_timeout_fin_wait = 3
net.ipv4.netfilter.ip_conntrack_tcp_timeout_close_wait = 3
net.ipv4.netfilter.ip_conntrack_tcp_timeout_time_wait = 3
net.ipv4.route.gc_thresh = 131072
```

Any help to fix this so it stops the crashes and slowness, is greatly helpful.

Thanks,

Kevin Hammett
