I am still experiencing this, including the NOHZ message, and horrible instability in general. It's a nightmare!

My uname -a:

```
Linux vhost-amc-01 2.6.32-042stab081.5 #1 SMP Mon Sep 30 16:52:24 MSK 2013 x86_64  
x86_64 x86_64 GNU/Linux
```

I can't go back to 5, I have to remain on 6. Is there a known kernel version that works really well with CentOS 6 and OpenVZ?
