Hello,

Docker is definitely different from openvz/lxc.

It's not an containerisation/virtualization technology, it's only bunch of code for prettyful managing lxc containers and no any else.

You must keep in mind lxc/docker do not suitable for production use but OpenVZ do!

You can view excellent presentation from Docker author, Jerom Petazzoni:

<http://tech.yandex.ru/events/yac/2013/talks/1085/>
