I have updated some HN servers to centos 5.10 with kernel 2.6.18-308.20.1.el5.028stab104.3 with no issues. waiting to reboot them.
with CT's it is no problem at all.

also don't see any problems with centos5-testing kernel version (2.6.18-371.el5.028stab109.2PAE for 20days, 2.6.18-371.el5.028stab109.3PAE installed but waiting for reboot).

so I think you are safe to update to centos 5.10.
