I think I found the reason here:

ht tps: [//www.centos.org/forums/viewtopic.php?t=4217](http://www.centos.org/forums/viewtopic.php?t=4217)

I checked and the USB that I used to install the system has the same UUID as my /boot/efi partition.

And so most likely the boot tried to load bad from bad EFI device.

Bests

Semir
