Subject: Re: Time inside container
Posted by dipps on Sun, 12 Jan 2014 13:49:01 GMT

There's a section "Changing System Time from VPS" in the OpenVZ Users Guide. It recommends running ntpd in one container, then giving this container capability sys_time so it can set the time for the HN. And presumably the other containers.

Is anyone able to confirm that container time is based on HN time?
