Heh, I suppose it doesn't matter anymore. I reformatted, and this time, didn't bother using LVM (Just a normal partitioning scheme, with the root [/] partition on the first, 8 GB hard drive, and the /home and /var partitions on the second hard drive, a 10 GB drive. The reason I used LVM was to utilize both hard drive, but I like the way I'm doing it now, it's a lot simpler to manage )

Anyways, I'll try the precompiled package, and tell you how I go

EDIT: OK, that didn't work. I installed the package, but it didn't like my network card (a Realtek RTL8139-based card)

I tried compiling, with the same result... What should I do?
