yes, there was snapshot, which not deleted from 27 December 2013.

and in this state CT was migrated to another node.

then was changed disksize limit from 100GB to 50GB (size of root.hdd was 100TB + about 15GB size of snapshot root.hdd{uuid} ).

and 2 days ago we deleted snapshot.
and after that, image file was decreased from 100GB to 80GB
