Hello,

I'm sorry for the late answer.

Please refer to the two attached load logs for a container. Currently we don't have a "ps aux" output, but next time when a load happens we will send you the ps aux output. Note that a load can happen 5 times per day, but it can happen only 1 time for a month, so there is no estimate time.

We are using this software to monitor our OpenVZ : download.openvz.org/contrib/utls/monbean/
During a load we receive a email message that container uses all of its resources.

Tell me if you need any additional information.

Regards!
